

Žilvinas Akelis

Frontend Software Developer

Kaunas, Lithuania • akeliszilvinas@gmail.com • linkedin.com/in/akelis-zilvinas • github.com/AkelisDev • akelisdev.com

PROFILE

Frontend-leaning software developer with **4.5+ years** building a production, multi-module **SaaS-style ERP platform** for a manufacturing company — a **lead contributor** on a 7-person engineering team. Specializes in complex, stateful UIs: rule-driven configurator/form systems, real-time **SVG technical drawings**, and document-generation pipelines. Strong Vue.js + Vuex foundation in component architecture and state management, now extending into **React and TypeScript** — backed by two public, tested React/TypeScript projects below.

EXPERIENCE

Frontend Software Developer — Ryterna Group, ERP Platform Jan 2022 – Present

Vue.js ERP for a windows/doors/gates manufacturer — ~180K-LOC front end, 440+ components, built with a 7-person team.

- Architected a rule-driven product **configurator engine** spanning **25+ pluggable controller types** (sliders, colour/thumbnail pickers, dependency logic, add-on modules), powering real-time pricing and live **SVG technical drawings** of configured products.
- Engineered an automated **PDF quote/confirmation pipeline** that mirrors the live order UI exactly in both pricing logic and visual output, removing manual discrepancy checks.
- Owned an **89-module Vuex** state architecture and the validation framework behind a multi-step order flow, including multi-file upload handling.
- Delivered across **three product domains** — admin/configuration (formula & scripting engine, pricelists, permissions/roles, translations), sales & order management, and production/shop-floor (task tracking, **barcode scanning**).
- Bridged frontend and shop-floor systems — integrated **WebSocket / SSE / Telnet** equipment communication alongside backend and production engineers.
- Worked within a shared architecture and code-review workflow across a 7-person team; **Jira**-based weekly/monthly/quarterly planning and daily **Git** branching.
- Testing & tooling: **Jest** unit tests, **Playwright** & **Cypress** E2E, **Storybook** component workshop.

PROJECTS

UI Kit — [React](#), [TypeScript](#), [Vitest](#), [jest-axe](#), [Tailwind CSS](#)

Accessible component library (Button, Checkbox, TextField, Select, Dialog) — every component keyboard-operable and verified with jest-axe. Select is a from-scratch ARIA combobox, not a wrapped native element; Dialog implements a real focus trap with focus restoration. 32 tests passing.

Configurator Kit — [React](#), [TypeScript](#), [Zustand](#), [Vitest](#), [Tailwind CSS](#)

Schema-driven product configurator engine (dependency rules, live pricing, validation) driving three unrelated demo products from plain schema data — the public, non-proprietary version of the problem solved daily on Ryterna's platform. Store is Context-scoped rather than a global singleton, proven with a dedicated multi-instance isolation test. 32 tests passing.

SKILLS

Frontend & UI	Vue.js, JavaScript (ES6+), React, TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap
Architecture & State	Vuex at scale (89-module store), component architecture (440+ components), plugin-style controller systems, i18n / multi-locale
Integration	REST APIs (Axios), WebSocket / SSE / Telnet, SVG drawing & PDF generation pipelines, barcode scanning (QuaggaJS)
Testing & Process	Jest, Playwright, Cypress, Storybook, jest-axe; Git, Jira (agile planning), Node.js (build/serve tooling)
Data	MySQL / MariaDB (schema navigation, queries & edits via phpMyAdmin)

EDUCATION & MORE

Education	Languages	Interests
Automation Engineering Kaunas University of Technology	Lithuanian — native English — professional working	Dog training, piano, sports, technology
Full-Stack Web Development freeCodeCamp
